OPERATING INSTRUCTIONS

AT THE ENTRY STATION:
1. Momentarily depress button (for a few seconds) for apartment you wish to call. This will cause the ringer to sound at the apartment monitor handset, and the video screen to light and display the visitor.

2. Reply in a normal voice when spoken to. Visitor reply is hands-free.

3. When door release activates (buzzes), enter through door.

AT THE 5802 MONITOR STATION:
1. You will hear an electronic ring tone when a visitor presses your button at the entrance station.

2. View the visitor on the COLOR video screen. You may adjust the picture brightness as desired, using the bottom mounted adjustment knob on the video monitor.

3. You may choose to ignore the caller, or lift the intercom handset to answer. Speak to the visitor in a normal voice. Make sure you positively identify all visitors *before* activating the door release... or do **not** open the door!

4. Only if you are satisfied with the identity of the visitor, momentarily depress the Door release (blue button) on the monitor, which will electrically activate the door release mechanism. Activating the door release will not shut off the video picture. Video monitor will time-out automatically after approx. 40 seconds (unless the time-out duration has been changed by the installer/user).

In systems with multiple door entry stations, the system will automatically switch the voice, video and door release functions to the last entry station that placed a call.

FEATURES
