

Each AlphaStatus™ system is provided with a CD-Rom containing software to easily create and maintain your Master Station labelling/ numbering. If the CD is lost or misplaced you can download this software free from our website at: **www.alpha-comm.com**, in the **DOWNLOADS** section.

Labelling of Master Switch/Buttons can be done either before the module is put into the frame or after. However, we recommend that they be marked during installation or removed from the frame for labelling. Be careful not to pinch, crimp or break wiring when removing / installing the module(s).

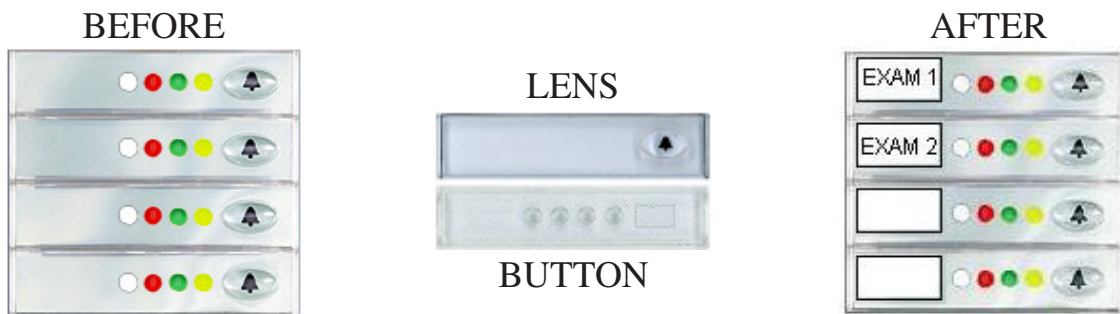

Working from the **LEFT** side of the unit, with a small screwdriver or a coin, gently push up on the ridge at the top of the lens at the point shown below.

SIDE VIEW

Once the lens is separated from the button assembly, place the label that you have made with the included software, or handwritten on a blank label, on the **LEFTMOST** side, so as not to obscure any of the indicator LEDs. When satisfactorily aligned, gently replace the lens with the raised bell button to the **RIGHT**.

Do not exert excessive pressure on the switch to seat the lens, as it will attach easily.
